

### **Quality Frameless Glass Fencing Systems**

Frameless fencing is the ultimate in fencing systems. While providing safety, strength and security it simultaneously offers style, spaciousness and long-lasting quality. The clean lines and long-lasting finishes of "Frameless Glass Fencing Systems" products endure time and weather elements. Our designs preserve the beauty of your surroundings as there is virtually no obstruction to view, adds value to your property and gives you peace of mind, to know that you have an excellent product in every respect.

Frameless is about as "frameless" as you can get - normally two clamps at the base of each panel of glass. The high-quality marine-grade 316 stainless steel and toughened glass are low-maintenance and will out-last other products on the market continuing to look good throughout that time.

Frameless Glass Fencing Systems are market-leading world-patented products, which provide a wide range of mounting, clamping and fixing systems for frameless glass fencing, pool fencing and balustrades. They are manufactured from high-grade materials to stringent quality control, making our products stronger and more durable than most others that are available on the market today. They suit various gauges of glass panel, depending on the application, and come in satin or mirror finish. Our expertise in the industry, spanning over 30 years, led to the creation of the Frameless Glass Fencing System range of clamps and gate fittings, which have been certified by LNE, the world-recognised testing laboratory in France.

### **Product Overview**

<b>Solutions</b>	<b>Features*</b>
onto the top of paving or concrete	No inground channel
onto the side of slabs with and without coping overhangs	No additional site preparation
